講演タイトル

「New Developments in Human Performance
Research at the University of Oregon」

Mike Hahn, Ph.D.
Professor,
University of Oregon,
United States

At the University of Oregon, we are pursuing a blend of basic science exploration and practical application of research findings in the realm of human performance. Recent development of a 6-institution collaboration, called the Wu Tsai Human Performance Alliance, has led to a new set of research projects that are seeking better understanding the variations in human performance across a range of activities. This seminar will present examples of research that is exploring factors such as sex differences, muscle fatigue, tendon dynamics, footwear design, and neuromotor planning that can influence athlete performance, injury prevention and rehabilitation.
